DETAILED ACTION

Claim Rejections - 35 USC § 112

Claims 59 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. In claim 59 applicant claims that rotating the first conductor extends the fixation member relative to the lead body, however claim 34 sets forth that the first conductor is part of the lead body. Applicant provides no description in the specification as to how the fixation member could be extended relative to the inner first conductor.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 34-37, 62-64 are rejected under 35 U.S.C. 102(b) as being anticipated by Scott USPN 5,005,587.

Scott teaches a braid conductor (figure 2) 43 that has a composite coating (layer 54 and layer 56 deposited on top with a coil member 24 disposed inside with insulation

material 22 between the first coil conductor and the second braid conductor. The product by process claims provide no distinguishable structure.

Claim Rejections - 35 USC § 103

Claims 34-37, 47-51, 65-66 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bush et al USPN 5,674,272 in view of Scott USPN 5,005,587. Bush teaches a multilayer member as shown in figure 7 including a first conductor 114 and a second conductor with composite layers between the conductors as well as forming an outer layer. While coil members are shown in Bush, applicant claims at least one is a braid member and while Bush acknowledges that they may be of any shape he does not specify a braid. Using a braid conductor for that of a coil would have been an obvious choice to those of ordinary skill in the art with Scott showing such a construction. Applicant's new claims 65-66 merely recite other known methods of coating tubes and would have been an obvious alternative.

Allowable Subject Matter

Claims 38-39, 52-57, 58, 60-61 are allowed.

Response to Arguments

Applicant's arguments filed 3-29-2006 have been fully considered but they are not persuasive. Applicant does not particularly point out what the examiner is missing from the claim under the 102 rejection. In terms of the 103 rejection, the examiner disagrees with applicant's characterization of the references and still note that it was well known to substitute braids for coils.
